2015 Great Basin Fire Weather / Fuels Summary

Weather 2015 – Wet Summer

Total Precipitation Anomaly

Copyright (c) 2014, PRISM Climate Group,
Oregon State University

Notable Weather Events

- Very warm temperatures began early this year, with well above normal temperatures the last week in June increasing to over 100 degrees in most Nevada and Utah valleys, and over 110 for the valleys in the far south.
- Well above normal rainfall for July over western and northern Nevada, with wet conditions occurring over the entire Great Basin.
- Multiple tropical storms from the above normal eastern Pacific tropical season enhanced the effects of the normal monsoonal flow into the Great Basin, especially during July and August resulting in widespread, sometimes heavy precipitation.
- Many areas of the Great Basin remained “green” for prolonged periods of time this summer due to multiple periods of above normal moisture.

Western Idaho Mtns:

ERC's were on the rise through August and peaked the latter half of the month before dropping to below normal in September.

Western NV/Sierra Front:

ERC's peaked in June after warm and dry weather, but dropped in July/early August due to very wet weather. Warm and dry conditions returned later in August and September.

Northwest Utah:

ERC's fluctuated quite a bit throughout the fire season due to periods of wet and cool weather. Warm and dry weather returned in late August/September and pushed ERC's above normal.

Season Review

Fire Summary by the Great Basin

Great Basin had a slightly below average year for fire occurrence as well as for total acres burned during 2015. There were 2,096 fires reported, burning a combined total acres of 505,483.

Great Basin Fire Occurrence by State

Great Basin Fire Acres by State

Fire and Acre Totals by State and Protection Agency

The following chart itemizes fire activity by State and Agency illustrating the total number of fire starts and acres burned for the 2015 calendar year.

Note, consistent with the Incident Management Situation Report, the graph rounds to the nearest acre and will not show the tenths of acres in the total acreage.

	Arizona Strip		Idaho		Nevada		Utah		Wyoming (GB)		Total	
Agency	Fires	Acres	Fires	Acres	Fires	Acres	Fires	Acres	Fires	Acres	Fires	Acres
BIA	0	0	3	3	3	2	30	23	0	0	36	28

Great Basin comparison with Historical Averages

The Great Basin Geographic Area was within 78% of the 5 year average and 68% of the 20 year average for fire starts. Acres burned were less than normal at 50% of the 5 year average and 45% of the 20 year average.

Year End Totals by Cause

Fire statistics for this report were pulled from the SIT report. The statistics have not been reconciled with 1202s or FIRESTAT. The Great Basin Geographical Area reported 2,096 fires for 505,483 acres. 985 of those starts were human caused while 1,111 were natural fires. Historically, 40% of all fires reported are human caused. For 2015, the human caused fires were slightly above that average at 47%.

Human Caused		Lightning Caused		Totals	
Year	Fires	Acres	Fires	Acres	Fires
2015	985	49,066	1,111	456,417	2,096
2014	773	43,307	932	60,689	2,247

Summary of Fire Activity by Dispatch Center

Preparedness Level Review

Great Basin's preparedness level was elevated from 1 to 2 on June 21, incidentally one week later than during the 2014 season. This was consistent with historical Preparedness Levels. However, conditions remained moderate and thus the Great Basin remained at PL 2 through July and into August.

On August 12, the Great Basin's preparedness level raised to PL 3 with a spike in initial attack and resource commitment. This change was immediately followed with another spike in large fires coupled with commitment of multiple Incident Management Teams within the geographic area prompting an increase to PL 4 on August 13. This change corresponded with the escalation of the National Preparedness Level to PL 5 on the same date. Great Basin elevated to PL 5 where we remained for 6 days.

I have included the National Preparedness level markers on the display below to illustrate how the National situation was fairly consistent with the conditions experienced in the Great Basin.

Tepee Springs Fire

Large Fire Occurrence by Month

The first large fire of the year was the Quakie Haven incident in Sevier County Utah. The Quakie Haven fire was a 492 acre human caused fire located just east of Koosharem, UT in the Quakie Haven subdivision. It started on April 14th, 3 days later than our first large fire in 2014.

The largest fire of the year was the Soda. The Boise District BLM lightning caused fire 8 miles NE of Jordan Valley started on August 10th and was contained on August 23rd.

The graph below shows large fire activity by month. The numbers indicate a significant departure from the normal pattern for large fire occurrence within the Great Basin. July is the most notable deviation with only 14 large fires for the entire month.

Tepee Springs

Fire Activity Map

Large Fire Activity Review

Per the National Mobilization Guide, a large fire is a wildland fire managed for complete perimeter control (Full Suppression) that is 100 acres or larger in timber fuel types and 300 acres or larger in grass or brush fuel types. There are other incidents that require ICS-209s, but the chart below only fires that meet the 100+/300+ description and are sorted by start date of the incident.

Resource Order Summary

Filled Orders

Aircraft Crew Equipment Overhead

During 2015, the dispatch community in the Great Basin entered 54,292 requests, 1,094 orders that were deleted, and we were able to fill 45,784 or approximately 72% of requests. This number is somewhat surprising considering the heavy competition for resources with an active fire season in four geographic areas simultaneously.

Great Basin MAC Group

The Great Basin Multi-Agency Coordinating (MAC) Group was activated from August 15 – September 4 during the 2015 fire season.

Area Command & National Incident Management Org - NIMO

Great Basin did not mobilize or host either an Area Command or National Incident Management Organization during the 2015 fire season. One was ordered for Incident Support in Boise, but the order was cancelled and the Area Command team was reassigned to the NWCC.

Type 1 Incident Management Teams

During the 2015 fire season, the Great Basin mobilized both of its Type 1 IMTs, on four separate incidents and one staging assignment. All of the orders filled were outside of the geographic area with the only exception being the Teepee Springs incident located on Payette National Forest.

Type 2 Incident Management Teams

This fire season the Great Basin Type 2 Incident Management Teams were limited to fifteen assignments. The initial mobilization was Wilcox's Team on June 21st to the Washington fire on the Humboldt-Toiyabe National Forest. The final mobilization for the season was Dunford's Team. Dunford was assigned to the Walker incident bringing the combined total days on assignment for all of our IMT2s to 190 days. This number is 52% greater than last season where the GB IMT2 teams only amassed 98 days on assignment. 190 days is within the normal range for incident management teams hosted by the Great Basin Coordination Center.
